

History of Changes

1. Version 0.2.0 (planned 10/2003)

- Provide Ant tasks(og)
- Add code completion functionality to the sql editor(og)

2. Version 0.1.3 (08/2003)

- removed code dep. to eclipse classes of the dbcopy base package (og)
- fixed wrong column description and column type method used in the plugin wizard (can cause build of unproper SQL create table statements) (og)
- 1st unit test method for copy implemented; result matrix in CVS available (will be provided in the FAQ section of the webpage and documentation after finishing the complete tests) (og)

3. Version 0.1.2 (08/2003)

- copy PK (og)
- copy FK constraints (og)
- additional mapping step now available (og)
- improved message output during copy process (og)

4. Version 0.1.1 (07/2003)

- bug fix release; html and pdf documentation added; fixed bugs:
 - 763103
 - 763129
 - 764577
- implemented feature request:
 - 763679 (og)
- dbcopy is now the standard file extension; please rename your existing xsql files to get full support: however xsql is still assigned to the SQL Execution editor for compliance with the previous version; its up to you to change it for this release; 0.2.0

- will not longer register the xsql ending to this plugin)
 - sql file extension for wizard is now configurable
 - load order of libraries can be changed
 - errors get not longer just logged to the dbcopy log but shown on the console and wizard message line as well (like its allready handled with exceptions)
- (og)

5. Version 0.1.0 (06/2003)

- Initial Release with following functionality
 - 1 wizard to visually select source and target database; visually select source tables you want to copy and start the copy process.
 - SQL editor where you can execute multiple sql statements in one step with selecting the target database within a dropdown list
 - SQL result view
- (og)
